Detailed Office Action

Status of the Claims

Acknowledgement is hereby made of receipt and entry of the communication filed 22 March, 2007. Claims 21-29 are pending in the instant application.

37 C.F.R. § 1.72

The objection to the abstract of the disclosure is withdrawn in response to applicants' amendment.

35 U.S.C. § 112, First Paragraph

The following is a quotation of the first paragraph of 35 U.S.C. § 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Written Description

Claims 21-29 stand rejected under 35 U.S.C. § 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Univ. of Rochester v. G.D. Searle & Co., Inc., 358 F.3d 916, 920, 69 U.S.P.Q.2d 1886, (Fed. Cir. 2004). Enzo Biochem, Inc. v. Gen-Probe, Inc., 296 F.3d 1316, 63 U.S.P.Q.2d 1609, (Fed. Cir. 2002). Regents of the University of California v. Eli Lilly & Co., 119 F.3d 1559, 43 U.S.P.Q.2d 1398, (Fed.

Cir. 1997). Fiers v. Revel Co., 984 F.2d 1164, 25 U.S.P.Q.2d 1601, (Fed. Cir. 1993). Amgen, Inc. v. Chugai Pharmaceutical Co., 927 F.2d 1200, 18 U.S.P.Q.2d 1016, (Fed. Cir. 1991). In re Rasmussen, 650 F.2d 1212, 211 U.S.P.Q. 323 (C.C.P.A. 1981). In re Wertheim, 541 F.2d 257, 191 U.S.P.Q. 90 (C.C.P.A. 1976).

To satisfy the written description requirement, a patent specification must describe the claimed invention in sufficient detail that one skilled in the art can reasonably conclude that the inventor had possession of the claimed invention. e.q., Vas-Cath, Inc., v. Mahurkar, 935 F.2d at U.S.P.Q.2d at 1116. The issue raised in this application is whether the original application provides adequate support for the broadly claimed genus of auxotrophic attenuated Listeria strains. An applicant shows possession of the claimed invention by describing the claimed invention with all of its limitations using such descriptive means as words, structures, figures, diagrams, and formulas that fully set forth the claimed Lockwood v. American Airlines, Inc., 107 F.3d 1565, 1572, 41 U.S.P.Q.2d 1961, 1966 (Fed. Cir. 1997). The claimed invention as a whole may not be adequately described where an invention is described solely in terms of a method of its making coupled with its function and there is no described or artrecognized correlation or relationship between the structure of the invention and its function. A biomolecule described only by functional characteristic, without any known or disclosed correlation between that function and the structure of the sequence, normally is not a sufficient identifying characteristic for written description purposes, even when accompanied by a method of obtaining the biomolecule of interest. In re Bell, 991 F.2d 781, 26 U.S.P.Q.2d 1529 (Fed. Cir. 1993). In re Deuel, 51 F.3d 1552, 34 U.S.P.Q.2d 1210 (Fed.

Cir. 1995). A lack of adequate written description issue also arises if the knowledge and level of skill in the art would not permit one skilled in the art to immediately envisage the product claimed from the disclosed process. See, e.g., Fujikawa v. Wattanasin, 93 F.3d 1559, 1571, 39 U.S.P.Q.2d 1895, 1905 (Fed. Cir. 1995). The court noted in this decision that a "laundry list" disclosure of every possible moiety does not constitute a written description of every species in a genus because it would not reasonably lead those skilled in the art to any particular species. Moreover, generalized language may not suffice as a patent description if it does not convey the detailed identity of an invention.

applicant may show possession of an invention by disclosure of drawings or structural chemical formulas that are sufficiently detailed to show that applicant was in possession of the claimed invention as a whole. An applicant may also show that an invention is complete by disclosure of sufficiently detailed, relevant identifying characteristics which provide evidence that applicant was in possession of the claimed invention, i.e., complete or partial structure, other physical and/or chemical properties, functional characteristics coupled with a known or disclosed correlation between function and structure, or some combination of such characteristics. biomolecules, examples of identifying characteristics some include a nucleotide or amino acid sequence, chemical structure, binding affinity, binding specificity, and molecular weight. The written description requirement may be satisfied through disclosure of function and minimal structure when there is a well-established correlation between structure and function. Without such a correlation, the capability to recognize or understand the structure form the mere recitation of function

and minimal structure is highly unlikely. In the latter case, disclosure of function alone is little more than a wish for possession; it does not satisfy the written description Regents of the University of California v. Eli requirement. Lilly, 119 F.3d 1559, 1566, 43 U.S.P.Q.2d 1398, 1404, 1406 (Fed. Cir. 1997), cert. denied, 523 U.S. 1089 (1998). In re Wilder, 736 F.2d 1516, 1521, 222 U.S.P.Q. 369, 372-3 (Fed. Cir. 1984). to be considered in determining whether there sufficient evidence of possession include the level of skill and knowledge the art, partial structure, physical in chemical properties, functional characteristics alone or coupled with a known or disclosed correlation between structure and function, and the method of making the claimed invention.

The claims of the instant application are broadly directed toward auxotrophic attenuated *Listeria* strains that are suitable as vaccine vehicles. The specification describes the generation and characterization of a **single**, **auxotrophic**, **L. monocytogenes** dal dal double-mutant. However, the disclosure fails to describe the generation of other suitable strains and fails to provide a reproducible means for obtaining said strains. Thus, the skilled artisan would reasonably conclude that applicants were in possession of this particular mutant, but no others.

Applicants traverse and submit that the claimed invention should not be limited to the double mutant identified by the examiner. It was argued that the specification provides support for a number of other attenuated strains (e.g., strains deficient in D-glutamic acid). This argument is not convincing. The passages relied upon only refer generically to other auxotrophic *Listeria* strains. It does not refer to any specific mutants that were generated that display the desired properties (e.g., attenuated and highly immunogenic). Moreover, the

U.S. Serial No.: 10/660,194 Applicants: Frankel, F. R., et al.

disclosure appears to suggest that double mutants are required to practice the claimed invention. The specification (see p. 19) clearly states that "The mutant is constructed by generating deletion mutations in both the *dal* gene and the *dat* gene, essentially following the procedures of Camilli *et al.*, (1993, Mol. Microbiol. 8:143-157)." The disclosure simply fails to identify any other strains of *Listeria* with the desired properties.

Scope of Enablment

Claims 21-29 stand rejected under 35 U.S.C. § 112, first paragraph, because the specification does not reasonably enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims. As previously set forth, the claims are broadly directed toward auxotrophic attenuated strains of Listeria that are suitable as vaccine vehicles. The disclosure describes the preparation of a single, auxotrophic, L. monocytogenes dal double-mutant. Appropriately drafted claim language directed toward this embodiment would be acceptable. However, the claims fail to support the full breadth of the claimed invention directed toward any auxotrophic attenuated strain.

The legal considerations that govern enablement determinations pertaining to undue experimentation have been clearly set forth. Enzo Biochem, Inc., 52 U.S.P.Q.2d 1129 (C.A.F.C. 1999). In re Wands, 8 U.S.P.Q.2d 1400 (C.A.F.C. 1988). Ex parte Forman 230 U.S.P.Q. 546 (PTO Bd. Pat. App. 1986). The courts concluded that several factual inquiries should be considered when making such assessments including the quantity of experimentation necessary, the amount

of direction or guidance presented, the presence or absence of working examples, the nature of the invention, the state of the prior art, the relative skill of those in that art, the predictability or unpredictability of the art and the breadth of the claims. *In re Rainer*, 52 C.C.P.A. 1593, 347 F.2d 574, 146 U.S.P.Q. 218 (1965). The disclosure fails to provide adequate guidance pertaining to a number of these considerations as follows:

invention is directed toward auxotrophic, attenuated The strains of Listeria that are suitable as vaccine delivery vehicles. The specification describes the generation characterization of a single, auxotrophic, L. monocytogenes dal /dat double-mutant. The disclosure fails to describe the generation of other suitable strains, provide a reproducible means for obtaining said strains, and only provides a single working embodiment involving the dal⁻/dat⁻ double-mutant. Moreover, the prior art (Marquis et al., 1993; Portnoy et al., 1998) teaches that the generation of attenuated, auxotrophic Listeria mutants with the desired biological properties is a difficult and unpredictable undertaking. Portnoy et al. (1998) reported (col. 5, lines 60-62) that "Certain nutritional auxotrophs may be less preferred in L. monocytogenes [sicmonocytogenes] as attenuated mutants since they may not be as easily attenuated." Moreover, Marquis et al. (1993) reported (see Abstract) that "L. monocytogenes transposon insertion mutants requiring either uracil, phenylalanine, glycine, proline, or nicotinic acid for growth were fully virulent and grew similarly to the parental strain." The authors further note that the intracellular milieu of eukaryotic cells actually provides a rich medium that allows many Listeria mutants to propagate. Accordingly, undue experimentation would be required from the skilled artisan to practice the invention in a manner commensurate with the scope of the claims.

Applicants traverse and submit that the claims are fully enabled by the disclosure. It was argued that the specification provides additional support for other Listeria mutants (e.g., dat or beta-semialdehyde dehydrogenase mutants) with the desired It was further argued that the prior art provides properties. other methods for developing auxotrophic Listeria mutants. These arguments are not convincing. First, the disclosure only describes the characterization of a single auxotrophic, L. monocytogenes dal dat double-mutant that has the properties (e.g., sufficient attenuation combined with the ability to a induce strong immune response against heterologous immunogen of interest). Second, contrary to applicants' assertion, while it is possible to generate additional auxotrophic mutants, the question is which of these mutants will remain sufficiently attenuated without causing disease, but still allow expression and presentation of As set forth supra, the prior immunogen of interest. art clearly discloses a number of caveats associated with the development of suitable strains. Accordingly, the rejection is hereby maintained.

Finality of Office Action.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 C.F.R. § 1.136(a). A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened

U.S. Serial No.: 10/660,194 Applicants: Frankel, F. R., et al.

statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 C.F.R. § 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Correspondence

Any inquiry concerning this communication should be directed to Jeffrey S. Parkin, Ph.D., whose telephone number is (571) 272-0908. The examiner can normally be reached Monday through Thursday from 10:30 AM to 9:00 PM. A message may be left on the examiner's voice mail service. If attempts to reach the examiner are unsuccessful, the examiner's supervisor, Bruce R. Campell, Ph.D., can be reached at (571) 272-0974. Direct general status inquiries to the Technology Center 1600 receptionist at (571) 272-1600. Informal communications may be submitted to the Examiner's RightFAX account at (571) 273-0908.

Applicants are reminded that the United States Patent and Trademark Office (Office) requires most patent correspondence to be: a) faxed to the Central FAX number (571-(updated as of July 15, 2005), b) hand carried or delivered to the Customer Service Window (now located at the Randolph Building, 401 Dulany Street, Alexandria, VA 22314), c) mailed to the mailing address set forth in 37 C.F.R. § 1.1 P.O. 1450, Box Alexandria, VA 22313-1450), transmitted to the Office using the Office's Electronic Filing System. This notice replaces all prior Office notices specifying a specific fax number or hand carry address for certain patent related correspondence. For further information refer to the Notice of Centralized Delivery and Facsimile Transmission Policy for Patent Related Correspondence, and Exceptions Thereto, 1292 Off. Gaz. Pat. Office 186 (March 29, 2005).

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system,
